BODY

EXTERIOR PAINT	2
EXTERIOR-INTERIOR COLOR COMBINATIONS	3
BODY CONSTRUCTION AND GLASS AREA	4

EXTERIOR PAINT PROCESS

1. **PRIMARY SANDING.** All body panels and bonded joints that receive acrylic lacquer are dry sanded to prepare surfaces for painting. A filler material, called putty rub, is applied to the entire body to fill minor imperfections.
2. **PRIMER.** Two coats of primer are applied -- the first red and the second gray -- and are oven baked for 60 minutes at 280 degrees F.
3. **WET SANDING.** The body is wet sanded to provide a smooth surface for the sealers. Most of the gray primer coat is removed with the red primer acting as a depth signal for the sanding operation. The body is dried to remove all moisture.
4. **SEALER.** One coat of sealer and one coat of color acrylic lacquer are applied and baked.
5. **DRY SANDING.** The body is dry sanded to prepare surfaces for the final acrylic lacquer.
6. **LACQUERING.** Three coats of acrylic lacquer are sprayed on the body to build up the required paint thickness. The paint is "rested" for eight minutes to permit it to partially set up and to remove excess volatile paint vehicle.
7. **INITIAL BAKING.** The body is oven baked for 30 minutes at 140 degrees F to harden the paint which permits the subsequent operation. Small interior and exterior parts are painted to complete the body paint schedule.
8. **FINAL BAKING.** To assure a durable, hard, high luster finish the lacquer is oven baked for 45 minutes at 250 degrees F. Reheating the lacquer permits the paint film to soften and allows surface blemishes and sanding scratches to disappear during the thermo-reflow process.
9. **FINAL SANDING AND POLISHING.** The body is lightly oil sanded and polished to bring painted surfaces to a high luster finish.

The 1966-'67 427 Corvette was a hit

An egg crate grille and functional engine compartment cooling vents distinguished 1966 Corvettes. A new muscle Corvette was the "427" with its own funnel-shaped power bulge on the hood. There were two of these big-blocks at first. RPO L36, priced at \$181, was the 390-hp job. RPO L72, with a \$312

The 1966 Corvette 427 convertible with detachable hardtop.

price tag, delivered 425 hp. Both engines were related to the "mystery" 427 and the production Turbo-Jet 396.

The 427-powered convertible (425 hp) could hit 60 mph in 5.7 seconds and do the quarter mile in 14 seconds. It had a very favorable power-to-weight ratio of only 7.7 pounds-per-horsepower. For identification, "427 Turbo-Jet" crossed racing flag emblems appeared over the cooling vents. Three four-speed gearboxes—wide-ratio, close-ratio and heavy-duty close-ratio—were optional. A popular extra was side-mounted exhaust pipes.

Engine codes for 1966 big-blocks were IL for the regular L36, IM for the California air-

reactor version and IP for the L72. A total of 5,116 L36s were built and L72 production was 5,258 motors. Nearly 38 percent of the 1968 Corvettes were 427s.

For 1967, the Corvette got additional engine cooling vents and 427s got a different "power bulge" hood and more top horsepower. The new hood had a large forward-facing air scoop, usually with engine call-outs on both sides.

There were four versions of the 427 in 1967. The L36 was about the same. Next came the L68, with 400 hp and then the L71 with 435 hp. Extremely rare (only 20 built), and in a class by itself was the aluminum-headed L88. This powerhouse was officially rated at only 430 hp, but in

fact developed nearly 600! Depending on the mix of equipment, L36s were coded IL, IM, IQ, IR; L68s were coded JA, JC, JD, JF or JG and L88s had JU or JH codes. All L71s were stamped JE and all L88s were stamped IT. In all, 9,707 big-blocks were built, so 42.31 percent of all 1967 Corvettes were 427s!

SUPPLEMENTARY DATA

1967

PROTECT-O-PLATE DATA

Beginning with 1965 model year, owners of Chevrolet passenger cars received an embossed metal "Protect-O-Plate" after the purchase of their car that was to be attached the last page of the warranty booklet. The information on the plate was intended to give the dealer relevant production data about the car, but it can also be useful in determining a car's original equipment. Refer to the 1963-67 Addenda section for a complete plate translation table.

PAINT CODES

The 1967 Corvette paint codes functioned similarly to the 1966 codes; refer to the 1966 section for details.

Paint Code	Color	Interior Trim Restrictions
900AA	Black	None
972AA	White	None
974AA	Red	Black-red-white and black only
5AA	Bright Blue	Black-bright blue-white and bright blue only
7AA	Dark Blue	Black-dark blue-white and black only

BIG-BLOCK HOOD STRIPES

When we began research for this book, one of the mysteries we confronted was the hood stripes' color on 1967 big-block Corvettes. Why were the hood stripes painted white on some black cars, and red on other black cars? We were determined to get the answers and provide an accurate hood stripe color chart.

As we began to compile survey data, a pattern emerged. Four areas appeared to affect the color of the hood stripe: exterior (paint), trim (interior), hood stripe and tires. Tire colors were included, because they were available in three variations—blackwall, whitewall and redwall—which seemed to influence the stripe color. Results suggested that a red car with black tires would have a black stripe, while a red car with whitewalls had a white hood stripe. Likewise, the stripe color on a black body might be affected by the tires. With whitewalls, the hood stripe could be white, but with redline tires the hood stripe would be red. These conclusions appeared logical, and were corroborated with many examples. Occasionally, however, an exception to the tire color influence theory surfaced, leading us to question how many of our samples still had their original paint, tires and stripe?

We were particularly puzzled by two original '67s, a coupe and a convertible. We saw both cars months apart, yet both were comparable because they were triple-blue. That is, the body was blue, the interior was blue,

and the hood stripe was blue—all different shades of blue. The exterior was Silver Blue (980), the trim (interior) was Bright Blue (414), and the hood stripe was Dark Blue (977). The dark blue hood stripe was only a match against the Silver Blue hood. This color combination was rare and raised a question of authenticity, but both cars appeared to be untouched originals.

Fortunately, we were able to locate the original 1967 hood stripe color chart, and to our surprise the hood stripe color was determined by the exterior trim (interior) colors. The tire colors were incidental and had no influence on the hood stripe color.

Here, from Chevrolet's files, is the 1967 hood stripe color chart:

1967 FACTS

- Last of the 1963-67 "mid years," 1967's exterior was the least adorned due to removal of trim, including hood script emblems and fender flags. Functional fender vents were a new style for 1967 with five angled slots.
- Seat design was modified and the parking brake handle was redesigned and relocated from under the instrument panel to between the seats.
- Safety legislation required a modification of the knock-off wheel option. For 1967, it changed to a bolt-on, cast alloy style with a clip-on center cap to conceal the lug nuts. Rally wheels were no-cost standard equipment.
